

BLASTING WORK

September 19, 2016 - As part of Turcot Project, blasting work will take place between **September 26 and October 7, 2016**, in the Complexe récréatif Gadbois area. This work, which includes several blasts, will shatter rock to replace a drainage conduit and, in the same time, to limit inconveniences (duration, vibrations and noise levels) on residents living in the area.

Safety measures

- A fence will delimit the construction area
- Installation of a blasting mat over rock to contain the projection of rock
- Display of safety measures around the worksite

Steps for each blasting

1. Twelve short alarms will be heard
2. Blasting
3. One longer final alarm to indicate that blasting is over and that the zone is secure

When blasting will occur, vibrations may be felt during a few seconds. Noise level will be higher during deflagrations.

Work Schedule

Work will be carried out during daytime, **from Monday to Friday, from 7 a.m. to 7 p.m.** Note that blasting could be performed on weekends as needed.

When blasting operation will take place, approximate hours for each blasting will be posted on the Turcot website: www.turcot.gouv.qc.ca
